NADS appoints HWA CREATE as a Simware reseller for China

Madrid, Spain and Beijing, China— May 1, 2015

Hwa Create will be a Simware’s Value Added Reseller (VAR) in People’s Republic of China .

NADS™, a global leader in standards-based, Open Simulation platforms, announced today that it had appointed HWA CREATE as his third partner in People’s Republic of China. Under the agreement’s terms & conditions HWA CREATE will resell the products and services included in SIMWARE portfolio.

HWA CREATE is a high-tech enterprise registered in Zhong Guan Village Science and Technology Parck, and it is listed in Shenzhen Stock Exchange market since 2010. HWA CREATE focuses on R&D, manufacture and sales of technologies and products of satellite navigation, radar and communications, navigation and communication antennas and embedded systems in complicated electromechanical industries of aviation, aerospace, ship and simulation and training.

To NADS, this agreement will allow to expand the use of Simware based solutions at People’s Republic of China. Quoting Mr Jose-Maria Lopez, VP for business development in NADS: “We started in 2013 our activities in China and, 2 years later, I can say that Simware is emerging here as the platform of choice for many simulation applications, mainly complex integrations demanding interoperability between many heterogeneous systems, real and simulated. This agreement is another proof of the great market opportunity we have in People’s Republic of China for Simware. Customers here are not happy with the lack of interoperability, reusability and modularity of the simulation applications now in the market and all these unsatisfied simulation users are starting to ask for Simware as a solution to these pains.”

To HWA CREATE, this agreement is a great opportunity to offer to their customers an easy and powerful way to perform complex functions in a simulation environment. Zhengjun Fu, the Vice General Manager of HWA CREATE said: “the trend in the Chinese simulation market is towards complete simulation systems. This trend requires a flexible architecture that allows to integrate different systems in a simulation environment. Customers are asking for a solution covering LVC Simulation without limitations and we will leverage Simware to fulfil this request. HWA Create has already a rich experience and many assets in virtual training, distributed simulation, experimentation, hardware in the loop and embedded systems and Simware will be the platform to integrate our complete portfolio into sophisticated integrated solutions for any kind of simulation application: from the virtual training of existing systems to the virtual prototyping of new systems”

About Simware

Simware is leading the evolution of M&S to the Cloud, enabling the use of simulations as Services in the first Open and standards-based platform available for simulation in the market.

Our platform is the first commercial product available to build and federate simulations in compliance with initiatives at SISO and NATO related to the use of Simulations assets as Services in the Network.

Simware platform provides, out-of-the-box, seamless interoperability of SISO simulation standards like HLA, DIS or CBML with the OMG DDS standard. Multi-standard compliance makes affordable to any budget the development and deployment of LVC simulations over any kind of network.

Simware is the technological company of NADS. NADS is a simulation company, leveraging radical innovations to make affordable the use of simulation solutions for anyone, anywhere and anytime.

About HWA CREATE

Hwa Create is the leader providing virtual training simulator, complex simulation solution, and test and experiment system simulation solution in the market.

HWA CREATE possesses quality system certificates and related industrial professional certificates. Its core products include computer simulation and test platform for complicated electromechanical system, computer simulation application development services, Beidou satellite navigation chips, user machines, application modules and their corresponding simulated test devices, designated antenna for satellite navigation, embedded modules and simulated test devices for radar and communication system. The products and solutions are applied in industries of aviation, aerospace, ship, defense electronics, electrical power, automobile, high-speed rail transportation and communication.
